

INSECT SCREENS

ANNOYING INSECTS DON'T HAVE A CHANCE

Insect screens do not obstruct the view outside, they will make your sleep more pleasant and create a safer environment for your family. We offer a wide range of screens for windows and doors.

Everything made to measure and with a 4-year warranty.

INSECT SCREENS

Protects against insects and pollen. Guarantees peaceful and undisturbed sleep.

Different colours of the screen frame allow you to match the insect screen to the colours of the window.

For both big and small areas. Easy handling.

You can find a special anti-pollen mesh in our offer suitable particularly for allergy sufferers.

Types of insect screens

Fixed insect screens

Especially suitable for conventional windows, plastic, aluminium and wooden. Mounted directly onto the window frame. Some types of fixed insect screens do not require interference with the door frame during anchoring. In winter, the screens can be easily removed and reinstalled in spring. However, they can remain installed on the window all year round.

Door insect screens

Intended for all types of doors. The door insect screens can be opened and attach to the door frame with hinges. A self-closing system can be added. In the closed position, the door insect screen is fixed with magnets. For pet owners, we manufacture practical door insect screens with a pet access door.

Sliding insect screens

Mainly suitable for large sliding doors. However, they can also be used for French windows or terrace access doors. For their installation, sufficient additional space must be allowed for sliding the screen to the side. Thanks to integrated castor wheels, operation is smooth and quiet.

Pleated insect screens

They both provide effective protection against insects and are a modern accessory. Pleated insect screens consist of pleated mesh that decorates your home. The screen does not corrode and withstands temperature differences well. The screen is fitted with a magnet to prevent unwanted opening. The bottom guide profile is only 7mm tall.

Sliding insect screens

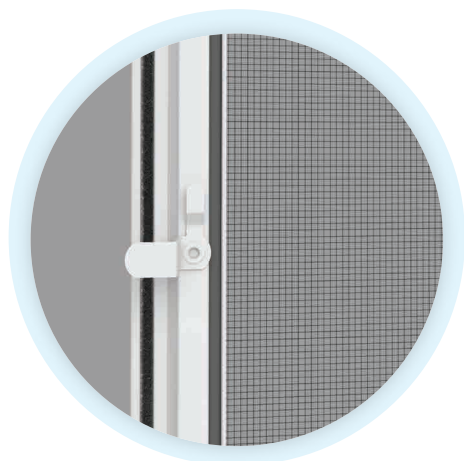

These screens will be appreciated by anyone wishing to enjoy an unobstructed view out of the window. They are a suitable alternative to fixed insect screens. The mesh can be easily and quickly retracted into the upper box with a cord or handle. The aluminium frame guarantees high strength and long service life.

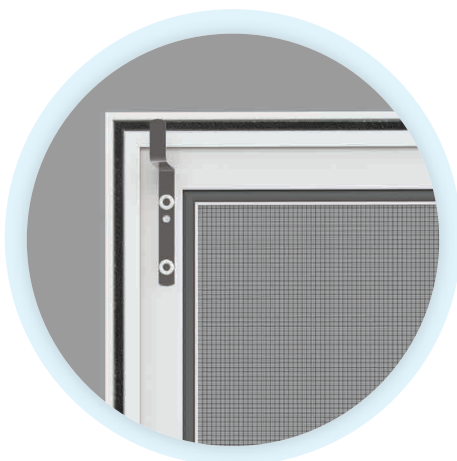

Door roll-up insect screens

They are the perfect solution for doors with little handling space around. As an advantage, the screen can be quickly retracted into the protective box. The extended screen is fixed with a magnet. The roll-up door insect screen is suitable for any door which does not see much traffic.

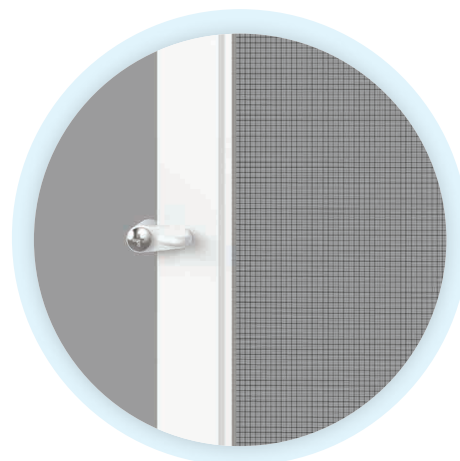

Anchoring elements for fixed window screens

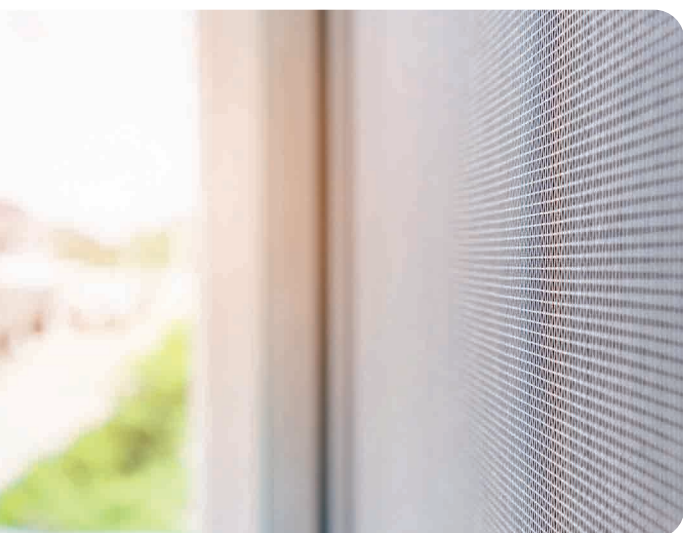

rotating hook

Z-hook

swivel clamp

Mesh

It is made of fiberglass, which is not subject to corrosion and tolerates well temperature differences. For an extra charge, it is possible to choose reinforced mesh or anti-pollen mesh. You can select a mesh that is black, grey or transparent.

Accessories for door insect screens

Pet doors can be added to opening door insect screens (with 30×35 cm dimensions for a dog or 18×18.5 cm dimensions for a cat). Door insect screens can also be fitted with gutter partition and inner handle.

Colour options

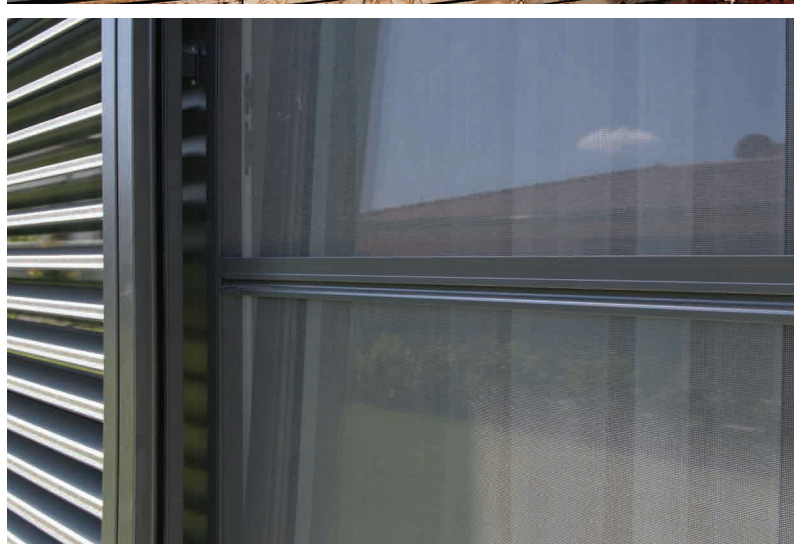

Everyone can choose from our wide range of colours and shades! Depending on the type of mesh, there is an option to choose the version with modification in standard RAL colours, in wood imitation, silver elox or varnishing in other RAL colours.

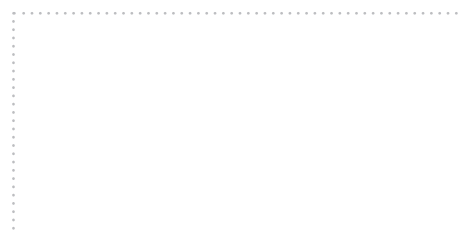

If you want to be sure about choosing the right colour, visit the store of one of our CLIMAX partners who have colour collections available and will be happy to advise you on the choice.
